### Design and make a bug hotel

There are lots of reasons to make a bug hotel/house

1. Broaden your understanding of nature - By building a bug hotel, you will be able to observe who checks in and how they live and what they eat
2. It helps solitary insects like butterflies, moths, ladybirds and solitary bees who do not live in colonies to have a warm dry space to build their nests
3. Loss of natural habitat
4. Add interest to your garden
5. Hands on way to learn and to work alongside others

Google 'How to make a bug hotel or house' and go to images and you will get lots of cool ideas. You can just use what you have lying around home - a cup, a bucket, an old pot and place things like twigs, straw, leaves etc inside.

Take a photo of them and send them to your teachers.
